

TECHIBOND™ ADHESIVES

TECHIBOND™ ADHESIVE – P931

DESCRIPTION & USES:

Techibond™ P931 is a 100% solids medium speed moisture curing Polyurethane suitable for bonding various substrates such as polystyrene foam, timber, Flexible PVC, Rigid PVC, Masonry etc.

PROPERTIES:

- Appearance: Cream coloured liquid.
- Specific gravity: Approx. 1.10.
- Viscosity: Medium brushable syrup.
- Initial gel time: 15-20 minutes.
- Cure Time: 12 Hours
- Coverage: 3-4m² per litre.
- Shelf Life: 6 months if unopened.

TECHIBOND™ ADHESIVE – P931

METHOD OF APPLICATION:

- To obtain the best possible results, the materials to be bonded should be clean, and free from dust, grit, loose materials, oil, or grease, and have a moisture content of 5-15%.
- Using a scraper or squeeze bottle apply a thin an even coating of adhesive to one surface and clamp for at least 30 minutes.
- If the surface are free of moisture a light misting with water to initiate the reaction may be required.

Note: Additional information on physical properties, health hazards, storage, handling, and transport is available in the Safety Data Sheet (SDS).
